

CONFINED SPACE FLYING

COURSE DESCRIPTION

This one-day course introduces participants to what makes flying in confined spaces unique, the benefits of using UAVs in the internal inspection process, which tools are right for which job, and how to implement these tools into your existing UAV operations. The day consists of various classroom discussions surrounding the topics outlined followed by a hands-on flight experience at Interactive Aerial's true confined space test center, a 560,000 gallon decommissioned storage tank.
